CS608 - WEB DEVELOPMENT LAB
M TECH
SEMESTER II
LAB 8

Date: 25/03/2025

1. Develop a real-time web chat application using socket programming to communicate between a client and server. Following features are to be included within the application:
   a. A client or server should be able to send any type of text message or an image file
   b. Provide a confirmation on the sender side that the message has been received by the receiver for each message
   c. The messages exchanged between client and server should be stored in a database
   d. Chats from previous session should be loaded when the connection is re-established
